

## SPC Dual Authorisation

This Technical Note explains the configuration of the “Dual Authorisation” feature through the SPC.

# SUPPORT INFORMATION

- The Dual Authorisation feature on the SPC system can be enabled to increase the security around door access
- When enabled, it requires two valid access users with access right to the same door to gain access. Each card must be presented to the door reader within a specific time to open that door.
- For this function to correctly work the Door and User must meet certain criteria:
  - The door must have the “Dual Authorisation” attribute enabled
  - Each user must be assigned a user profile that has
    - Set/Unset intrusion rights (minimum requirement)
    - Specific door selected
    - Door has selected “No time limit” or within a “valid Calendar timer” if calendar selected
