SPCgen1 Firmware 3.15

Dear customer,

we are delighted to announce the release of the new SPCgen1 controller firmware 3.15.0.

New in this version:

Expand Two Way Wireless portfolio with...

o New cube repeater allowing to expand signal & transmission range

o New internal bell for alarm signalization

o Minor system behavior adjustments

o changes to strings to support VdS 2252:2015-12 (04) Section 4.3.11

o some keypad interface strings for TWW alerts were too long

Bug fixes:

o Compatibility issue within EDP implementation using a wrong separator

o Bell retrigger adjusted according to national VdS standard

o
changes to support VdS 2252:2015-12 (04) Section 4.3.11: HOLDUP TYPE ZONES: There is a limit of maximum 3 triggering of the bells. For Germany VdS classes A and C the limit does not apply, so there could be limitless retriggering. This behavior is not configurable. Note that by default holdup zones have the silent attribute enabled

o changes
to support VdS 2252:2015-12 (04) Section 4.3.11: ALARM TYPE ZONES: Allow a way to configure the SPC panel so that an alarm MAY be retriggered by a different zone via the "Bell Retrigger Different Zone" and "Bell Retrigger" settings

As of the 6th of October 2025, the installer package will be available on our homepage /download centre.

If you have any questions, please do not hesitate to contact your acre account manager.
