

APERIO Encryption Key Order Form

Wireless Door Locks

Ordering of Aperio OEM Encryption Key

With a unique encryption key, you guarantee secure wireless communication in the parts included in the Aperio installation. You also get a guarantee that only selected installers and administrators will have access to the readers' configuration. ASSA AB recommends that each Aperio installation (online and / or offline) be locked with its own encryption key. The encryption keys are loaded into the Aperio readers using PAP software. In the case of technical support, the correct license must be specified if necessary. Vanderbilt Industries requires the following information be completed before issuing of the Aperio Encryption Key.

Reseller/Installer

OEM System Details

System and number of license / licenses*:

* Required information

It is the responsibility of each OEM to manage the encryption key in such a way that there is traceability to which key used by the respective customer.

ASSA does not control which key has been used by any customer and therefore cannot provide copies of the encryption key.
